

MANAN LALL

KEY ACHIEVEMENTS

- Optimized Performance**
Increased app efficiency by 30% through code optimization and effective library use.
- Secured Large-scale Logins**
Handled integration for 1000+ secure logins with smooth onboarding using Clerk authentication in 3 months.
- Intelligent AI System Design**
Designed and deployed AI-driven systems combining NLP, ML models, and backend orchestration for real-world problem solving.
- AI Powered Risk Detection**
Built intelligent AI pipelines to analyze and flag high-risk job postings, improving user safety through NLP-driven fraud detection.

CERTIFICATIONS

Python Foundation Certification - Infosys Springboard

Gained strong foundations in Python programming, data structures, and problem-solving

Prompt Design in Vertex AI - Google Cloud Skills Boost

Demonstrated skills in prompt engineering and multimodal generative AI using Vertex AI

Engineer Data for Predictive Modeling with BigQuery ML - Google Cloud Skills Boost

Learned to build ETL pipelines and predictive ML models within BigQuery ML

Software Engineering Job Simulation - J.P. Morgan Chase

Completed practical tasks in project setup, Kafka integration, H2 database integration, and REST API development & control

SOFT SKILLS

- Analytical Problem Solving
- Team Collaboration & Ownership
- Technical & Stakeholder Communication
- Agile Project Management

AI/ML Engineer | Full Stack Developer

workfurmanan@gmail.com https://www.linkedin.com/in/manan-lall-990421336/ Delhi

SUMMARY

I am a full-stack developer with strong expertise in building scalable web applications using React, Next.js, Node.js, and Flask. I specialize in AI/ML and computer vision, with hands-on experience in developing intelligent systems using YOLOv8, OpenCV, and NLP-based models. I have built real-time backends, event-driven workflows, and AI-powered products focused on performance, reliability, and real-world impact. I bring a solid programming foundation in Python, C++, JavaScript, and TypeScript, along with strong problem-solving, system design, and project management skills.

WORK EXPERIENCE

INFOSYS SPRINGBOARD

- Python InternSeptember 2025 - Present
- Designed and implemented Python-based NLP pipelines for analyzing unstructured text data and identifying risk patterns using machine learning techniques.
 - Performed data preprocessing, feature extraction, and model evaluation to improve classification reliability and reduce false positives.
 - Integrated ML logic with backend workflows, focusing on clean code, performance optimization, and real-world problem solving.

PROJECTS

- Splitr: Full Stack AI Expense Splitting WebApp**

[Preview](#)

 - Developed a full-stack AI-powered expense splitting application using React 19, Next.js 15, Tailwind CSS, and Shadcn UI
 - Integrated Clerk Authentication for secure user access
 - Utilized Convex for real-time backend logic and state management
 - Automated workflows handled with Inngest, enabling features like settlement reminders, background tasks, and AI-driven receipt parsing
- JobGuard AI: AI Powered Fake Job Detection Platform**

[Preview](#)

 - Developed an AI-based system to identify and flag fake job postings using NLP and machine learning techniques
 - Analyzed job descriptions to detect scam patterns, misleading language, and risk indicators
 - Built a backend pipeline in Python for text preprocessing, feature extraction, and classification
 - Designed the project to help users make safer employment decisions and reduce job fraud exposure
- SensAI: AI Powered Career Coach Platform**

[Preview](#)

 - AI-driven full-stack career assistant designed to streamline the job search and preparation journey.
 - Developed a comprehensive platform that provides personalized career guidance, industry insights, and interview preparation using integrated AI services.
 - Built responsive frontend UI with React and Tailwind CSS, and robust backend logic for scalable user workflows and data handling.
 - Implemented intelligent resume and cover letter builders, mock interview tools, and dynamic job-related analytics to enhance user success in competitive job markets.

SKILLS

- Programming Languages:** Python, C++, JavaScript, TypeScript
- Applied AI & Data Science:** Machine Learning, NLP, Computer Vision, AI/ML Integration, Pandas, NumPy, OpenCV
- Frameworks & Backend:** React, Next.js, Node.js, Flask
- Databases & Tools:** Convex, SQLite, NoSQL Git, GitHub, REST APIs, CI/CD
- Systems & Workflows:** Event-Driven Architectures, Real-Time Backends, Authentication (Clerk)

EDUCATION

Guru Gobind Singh Indraprastha University

Bachelor of Technology (AI&ML) - 8.1 GPA2023 - Present

Dev Samaj Modern School

Senior Secondary School - 89%2022 - 2023
